

C Programming

2Marks

1. Data types → List four basic data types in C and their sizes.
2. Keywords → What are keywords? Give two examples.
3. Operators → Differentiate between `=` and `==`.
4. Control structures → Write the syntax of a `switch` statement.
5. Loops → What is the difference between `while` and `do-while` loops?
6. Pointers → What is a pointer? Give an example declaration.
7. Arrays → Write the syntax for declaring a 2D array.
8. File handling → Name two modes used in `fopen()`.
9. Structures → What is a structure? Give an example.
10. History → Who developed C language and in which year?
11. Compilation process → What is the role of the compiler?
12. What is meant by Union ? Give an example
13. Types of functions
14. What is meant by variables ? and why should we use ?
15. Which memory does program use RAM or ROM ? and why ?

5 Marks

- 1) Operators program → Write a program to demonstrate arithmetic and relational operators.
- 2) Control structures program → Write a program to check whether a number is even or odd using `if-else`.
- 3) Loops program → Write a program to print the multiplication table of a given number using a `for` loop.
- 4) Create 2d array and get user input and print them .
