

Java

```
import java.io.File;
import java.io.FileWriter;
import java.io.IOException;
import java.util.Scanner;

public class Lambda {

    public static void main(String[] args) throws IOException {

        File file1 = new File("component/file1/file2/file3");
        // file1.mkdir();
        file1.mkdirs();

        File file = new File("example.txt");

        file.createNewFile();

        FileWriter writer = new FileWriter("example.txt");

        writer.write("Subhiksha \n");
        writer.write("Harini \n");

        writer.close();

        Scanner sc = new Scanner(file);

        while (sc.hasNextLine() ) {

            String content = sc.nextLine();
            System.out.println(content);
        }

        // fiit academy => fiit (next())
        // nextLine()

        // Thread obj = new Thread( ()-> {
```

```
//      for(int i=0; i<=1000; i++){  
//          System.out.println(i);  
//      }  
//  }  );  
  
// obj.start();  
  
System.out.println("Program end");  
  
}  
  
}
```

1. Find the second largest number in an array
2. Check whether the string is palindrome or not
3. Remove duplicates from an array and arraylist
