

Java internship

```
public class Exceptionhandling {

    public static void main(String[] args) {

        System.out.println("Runtime");

        int a = 5;
        // exceptional handling

        try {

            int arr[] = {1,2,3};
            String name = null;
            System.out.println(name.length());
            System.out.println(arr[5]);
            System.out.println(a/0);
        } catch (ArithmeticException e) {
            System.out.println(e.getMessage());

        } catch (ArrayIndexOutOfBoundsException e){
            System.out.println(e.getMessage());
        } catch (Exception e){
            System.out.println(e.getMessage());
        } finally{
            System.out.println("After exceptional handling");
        }
        System.out.println("Runtime");
    }

}
```

```
//Thread -> predefined class

import java.io.File;
import java.io.FileWriter;
import java.io.IOException;
import java.util.Scanner;

class MyThread extends Thread{
```

```
    public void run(){
        System.out.println("Mythread");
    }
}

public class Multithreading {

    public static void main(String[] args) throws IOException{

        File file = new File("sample.txt");

        file.createNewFile();

        FileWriter writer = new FileWriter("sample.txt");

        writer.write("Hello there");

        writer.close();

        Scanner reader = new Scanner(file);

        while(reader.hasNextLine()){
            String line = reader.nextLine();
            System.out.println(line);
        }

        // MyThread obj = new MyThread();

        // obj.start(); // Mythread

        // obj.join(); // main thread waits until obj thread is complete
        // System.out.println("Multithreading");

    }
}
```
